

National Severe Weather Warning Service

Chief Forecasters Assessment

Conditions look conducive for another rapidly deepening area of low pressure to run quickly east-northeast close to the north of the UK during Monday. There remains some uncertainty on the exact track of this developing low pressure system, and therefore the areas at greatest risk of disruptive winds. Furthermore, should the system deepen more rapidly, or track further south, wind gusts could be higher than described above. Therefore, this warning will be reviewed again during Sunday for both coverage and likely impacts.

The Met Office have issued a **Yellow Alert of Wind**

Valid from **06:00 on Mon, 12th Jan 2015** until **21:00 on Mon, 12th Jan 2015**

Another rapidly deepening area of low pressure is expected to move east-northeast just to the north of Scotland during Monday. Gusts of 60-70 mph are likely widely through the warning area, with gusts in excess of 80 mph possible locally.

The public should be aware of the risk of disruption to both transport and power supplies.
